

## Message from the CEO

This is a time of change. National leadership, economic approaches, and scientific advancements are rapidly shifting at locations around the globe. The Triple Helix is no different. In this time of transition and change, our broad mission and international presence offer a variety of directions for future initiatives. TTH continues to span fields, push boundaries, forge new ways of thinking, and expand the horizons of analysis with these initiatives, most recently with the launch of our Electronic Publishing Division, our International Division of Science Policy, and our Career Development Resources.

Manisha Bhattacharya, our outgoing CEO, and TTH leadership around the world have transformed what began five years ago as a regular local journal into a global forum for science in society. It was not easy, and the challenges that were overcome in the past will simply be replaced by others in the future, but TTH has emerged bigger, better, and a truly unique force of change in our time. There are even more exciting days ahead. I hope you will join us as readers, members, and supporters as we continue, even in the face of changes and challenges, to expand, to move, and to push forward.

Sincerely,  
Julia Piper  
Incoming CEO, The Triple Helix, Inc.

## New Projects for 2009

©2004 Focus Features

### NEW EVENT

Science & Society Film Night - *Eternal Sunshine of the Spotless Mind*  
27th April, Bateman Auditorium, Gonville & Caius, 7pm

Join The Triple Helix and Caius FilmSoc for a screening of *Eternal Sunshine of the Spotless Mind* starring Jim Carey and Kate Winslet. Dr Amy Milton of Cambridge Neuroscience will give a brief talk about the neuroscience and ethics featured in the film. We invite you to join us afterwards for a discussion and refreshments.

### NEW SCHOOLS OUTREACH PROJECT

Science in Society Schools Resource Pack

As well as recruiting writers and editors to complete articles over the summer for our Michelmas 2009 edition, the literary and outreach teams will be joining forces to create a pack of Triple Helix articles for use in the classroom. With the introduction of new courses such as the 21st Century Science GSCE and A Level there is an ideal opportunity to allow pre-university students to read the work of undergraduates and assist teachers in enthusing them about the importance of science in society.

### NEW COMMUNITY OUTREACH PROJECT

Cafe Scientifique

Following a trial run of the Cafe Scientifique format, and attending the Cafes associated with the Cambridge Science Festival and Darwin 2009 Festival, The Triple Helix is keen to establish a regular Cafe Scientifique in Cambridge. This is a great opportunity to bring members of the public into contact with science and scientists in an informal setting.

*If you are interested in joining or making suggestions for any of the above projects, please email Jenny at [info@camtriplehelix.com](mailto:info@camtriplehelix.com)*
